Bonding Pins (Module Frame Bonding)

Bonding Bolt (Rail Bonding)
Installation

Compatibility: Fits modules with bottom flanges noted below. See IronRidge Flush, Tilt, Ground, or Ground Mount On The Roof Manual for full ratings and list of compatible modules.

1. Slide CAMO into rail channel far enough to clear the module frame. CAMO requires 6" of clearance from end of rail.

2. Place module on rails (module cells not shown for clarity).

3. Pull CAMO towards rail ends, at 45 deg angle, so the bonding bolt contacts the module flange edge.

4. Rotate handle with an upwards motion until CAMO snaps into rail channel. Ensure Camo bonding pins are fully seated on top of module frame.

Module Compatibility and Certifications

UL 2703

Allowable Design Load Rating
50 PSF downward, 50 PSF upward, 15 PSF lateral. Actual system structural capacity is defined by PE stamped certification letters.
